To Whom It May Concern,

I'm very grateful for the role WayCAM played in my education, and I hope it will continue to serve our students and broader community. Personally, I look back at a lot of formative experiences at WayCAM:

- In elementary school, WayCAM's media track at the Pegasus summer camp was my first exposure to real cameras, production systems, or really any "grown up" technology. This program gets kids excited about technology and journalism.

- The TV Production and Script to Screen classes were some of my favorites in high school because of the freedom we had to experiment and create work for our peers. I'm blown away by the projects from those classes.

- Volunteering at the studio was a lot of fun and led to a bunch of close friendships. Our talk shows gave us a voice and creative outlet, and we got to work through conflicts and mini-crises (something's always wrong when you're live) in real-time.

- I remember the consistent feedback (thank you, requests for recordings, online view counts) that people cared about the sports, talks, and performances we broadcasted. It's a powerful feeling to know your couple hours after school can make a lot of people's days.

With that in mind, I hope WayCAM can continue in this role with the necessary equipment and space.

Sincerely,

Jason Goodman
